Specifications:

Operating frequency		315 MHz
Operating voltage		9VDC
Battery life		Up to four (4) years (60 uses per day)
Dimensions	Single-gang	4 1/2" x 2 3/4" x 2 1/4" (114 x 70 x 57 mm)
	Slim-line	4 1/2" x 2 1/4" x 1 1/2" (114 x 57 x 38 mm)

Detail: Wireless Request-to-Exit Plates

Dimensions:

Installation:

1. Find a suitable location for the wireless request-to-exit plate.
NOTE: Do not house the plate in a metal box, this will greatly reduce the range.
2. The wireless request-to-exit plate can be either surface mounted or flush mounted.
3. Test the operation of the wireless request-to-exit plate in the location where it will be installed.
NOTE: The wireless request-to-exit plate first needs to be programmed into the SK-910R receiver before testing. See SK-910R receiver manual for transmitter learning procedure.
4. Check and make sure the battery clip is securely connected. Then mount the wireless request-to-exit plate in the back-box and secure it with the 2 included screws.

Changing the Battery:

The wireless request-to-exit plate has multi-colored LED that illuminates blue when the button is pressed. When the battery begins to run low, the LED will illuminate red. To change the battery:

1. Remove the 2 screws from the front of the plate and remove the plate from the back-box.
2. Remove the battery clip from the 9V battery and remove the battery from the bracket.
3. Place the new battery in the bracket and snap the battery clip to the new battery.
4. Test the unit with the new battery. The LED should illuminate blue.
5. Put the plate back in the housing and secure it to the back-box using the screws on the front.

Sample Application: Connecting to multiple wireless devices to an Electromagnetic Lock:

Troubleshooting:

LED is red	<ul style="list-style-type: none"> • 9V battery is low, replace with new one
LED does not light	<ul style="list-style-type: none"> • Check battery connection • Replace 9V battery
LED lights blue, but does not activate lock	<ul style="list-style-type: none"> • Check to make sure wireless request-to-exit plate is not housed in a metal box • Test wireless request-to-exit plate closer to the receiver • Clear codes from receiver, and re-learn wireless plate transmitter code
